

EGAT Research and Development Completed Project 2008

- Analysis of Combustion Factors on Pulverized Coal-fired Boiler Operation
- Sequential Event Recorder Design and Production
- A Study of Gear Box Oil Cooling for Conveyor System by Using Heat Pipe
- Formulation of a Strategic Plan on Research and Development for Electricity Generating Authority of Thailand
- Analysis Voltage Sag in the Electric System Effect for Customers
- Development of RTU with IP Protocol
- Air Emission Evaluation from Power Plant Stacks of EGAT
- The Research Project on Transformer Insulation, Phase II
- Development of Measurement Power Module Prototype
